Rappi

RAPPI is an app where you can order food, medications, groceries, etc. Is safe and inexpensive. Very popular in Colombia. Available for Android and iPhone.

Rappi

1

BEFORE THE TREATMENT

- Sleep, rest, hydrate and eat well.
- Do not consume alcohol or drugs.
- Follow the anti inflammatory diet.

2

DURING THE TREATMENT

- The Stem cells Colombia team will guide you through all the process.

3

AFTER THE TREATMENT

- Each patient and each condition are different. So our medical team will let you know exactly which are the recommendations in your specific case.

After Stem Cells IV

Each person reacts differently. Some people don't feel any major effects and others just want to rest.

We recommend, after an intravenous stem cell treatment, **not doing intense physical activity for 3 days**. Then, start gradually.

Tips

Start going to the gym after **three days**.

Avoid using the pool, hot tub, sauna, or jacuzzi for the **first 8 days**.

Avoid contact with animals at the site of the puncture to prevent allergic reactions or infections for **1 week**.

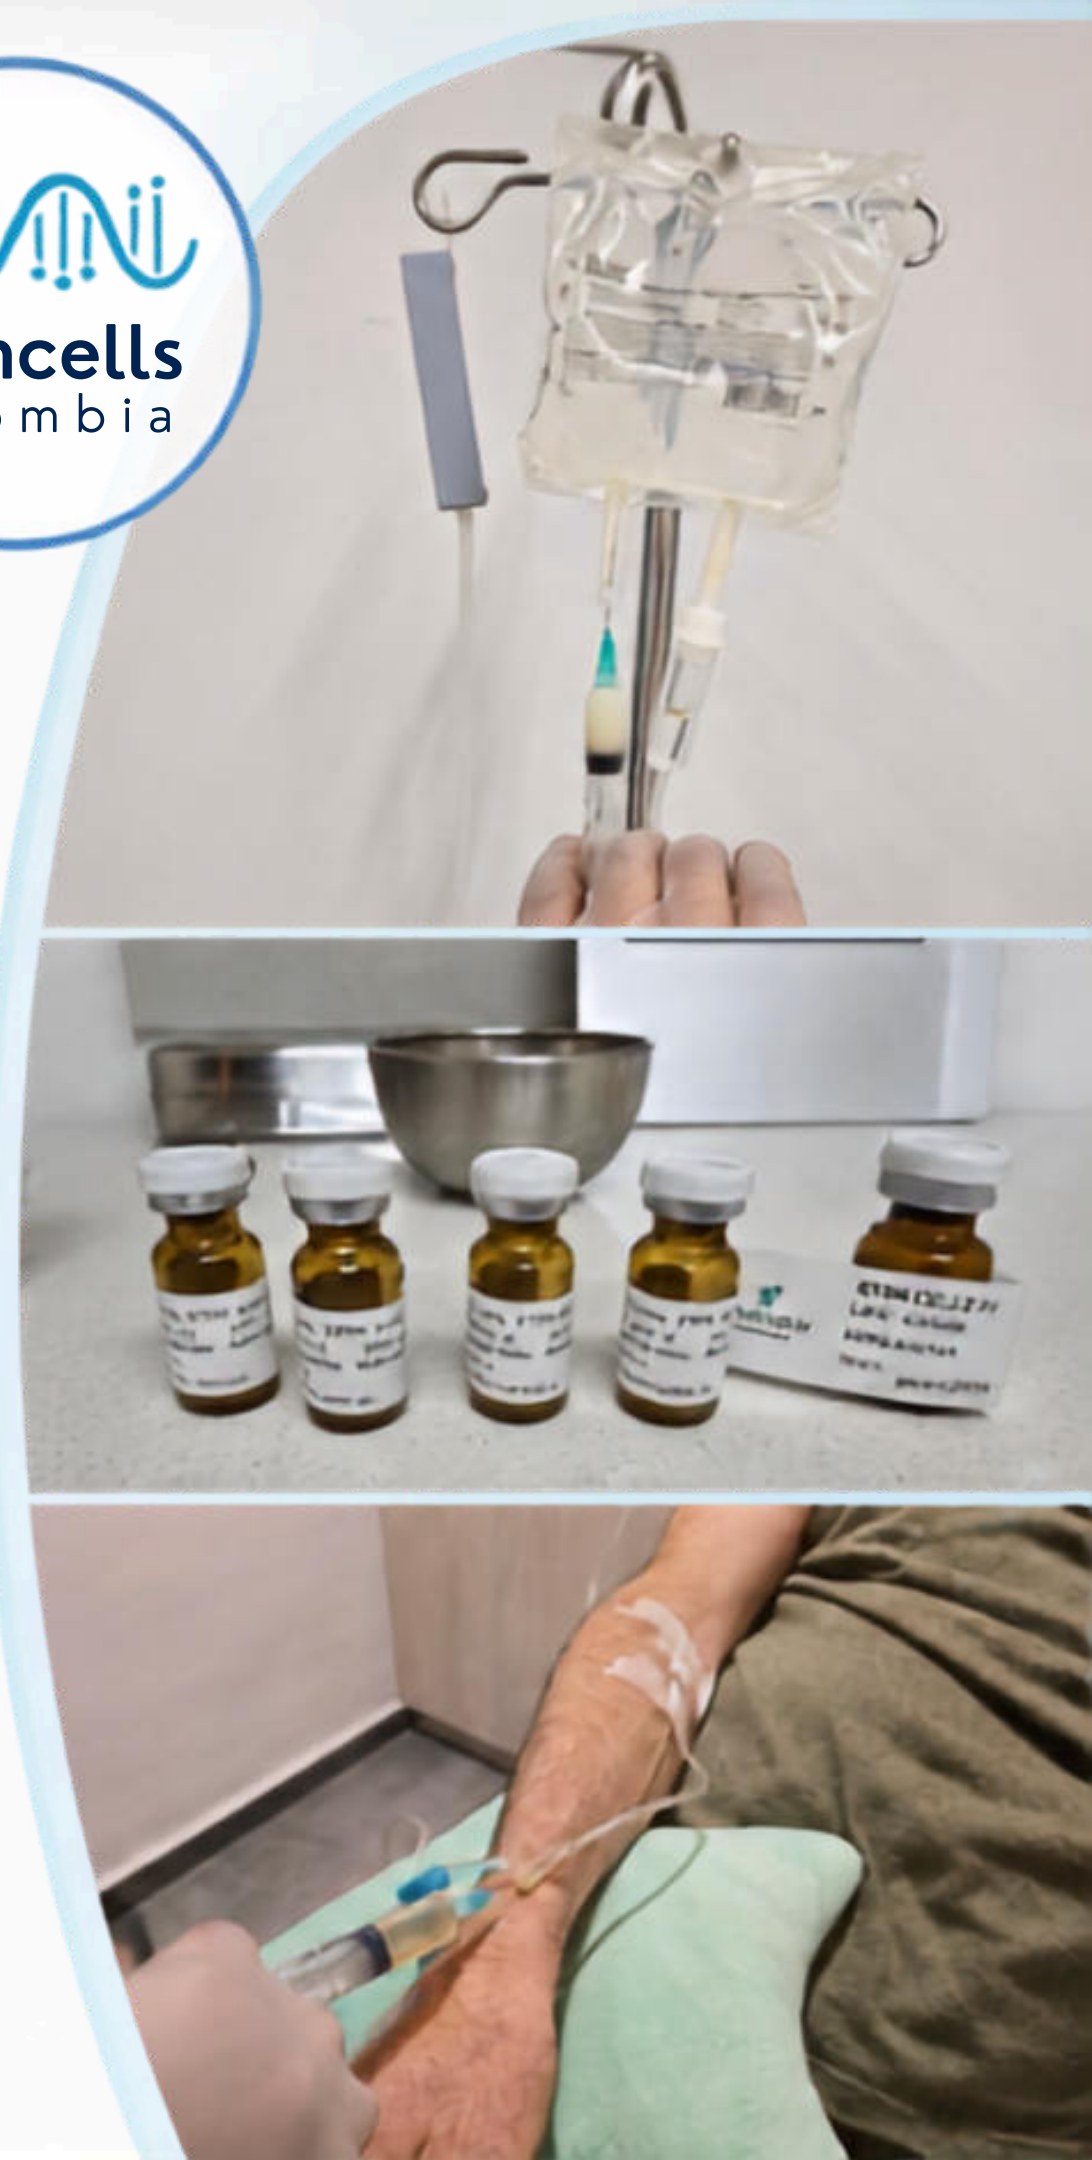

Refrain from taking NSAID medications such as Ibuprofen, Advil, Motrin, Aleve, Celebrex, Mobic, turmeric, CBD, ornica, or other natural "anti-inflammatory" remedies for **eight to ten weeks** post-procedure, as they may interfere with the healing process.

You may take **acetaminophen or Tylenol**.

Continue following the **anti-inflammatory diet**. Do not consume drugs or alcohol 2 weeks before, during and for 2 weeks after the treatment.

After Face or Hair

The face or scalp might be **swollen for 2 or 3 days**. It could be more depending on everybody's skin and health conditions.

Avoid swimming pools, jacuzzis, bathtubs, saunas, steam rooms or intense sun exposure **for 1 week**.

Avoid contact with animals at the site of the puncture to prevent allergic reactions or infections **for 1 week**.

Do not sleep face down for the **first 2 days**.

Resume intense physical activity **after 3 days** of application, but gradually.

Refrain from taking NSAID medications such as ibuprofen, Advil, Motrin, Aevele, Celebrex, Mobic, turmeric, CBD, annica, or other natural “anti-inflammatory” remedies for **eight to ten weeks** post-procedure, as they may interfere with the healing process.

You may take **acetaminophen or Tylenol**.

Continue following the **anti-inflammatory diet**.

AFTER CARE OF THE HAIR TREATMENT

- ✓ **A boost with Platelet-Rich Plasma (PRP) is mandatory**, starting one month after the initial treatment and continuing for 3-4 months, which can be performed in the patient's local area. Subsequently, PRP sessions should be repeated every six months or as advised by the dermatologist to support optimal healing and maintenance of results.
- ✓ **COMPLEMENTARY TREATMENTS:** Nutrafol supplements (is a brand), biotin supplements, Rosemary oil shampoo, goat milk shampoo.

AFTER CARE OF THE FACE TREATMENT

- ✓ **A booster with Exosomes/PRP is recommended**, starting one month after the initial treatment and continuing for 3 months, which can be performed in the patient's local area. Subsequently, PRP sessions should be repeated every six months or as advised by the dermatologist to support optimal healing and maintenance of results.

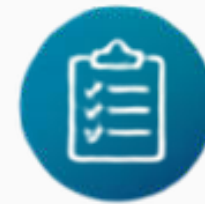

After the P-shot or V-shot

Mild discomfort, swelling, or bruising at the injection site.

Possible short-term sensitivity or tenderness. Possible fever or low energy.

Follow the doctors orders.

TIPS

Begin going to the gym in **three days**.

Avoid using the pool, hot tub, sauna, or jacuzzi for the **first 8 days**.

Avoid contact with animals at the site of the puncture to prevent allergic reactions or infections for **1 week**.

Refrain from taking NSAID medications such as ibuprofen, Advil, Motrin, Aleve, Celebrix, Mobic, turmeric, CBD, annica, or other natural "anti-inflammatory" remedies for **eight to ten weeks** post-procEDURE, as they may interfere with the healing process.

You may take **acetaminophen or Tylenol**.

Continue following the **anti-inflammatory diet**.

AFTER CARE OF THE P-SHOT OR V-SHOT TREATMENT

A booster with PRP is mandatory **every month for 3-4 months** for better results. Then, every 6 months or according to the doctor recommendations.

After Joint, neck or Back application: **FIRST DAY**

You're very likely to see significant inflammation in the **area that was treated**.
This is a normal side effect. **No anti-inflammatory medications are recommended** so the body can use its own inflammatory process to help with healing.

Analgesic creams or gels (bio-freeze, Traumeel) can help with pain.
AVOID NSAID (Non-steroidal anti-inflammatory drugs) medications such as ibuprofen, Advil, Motrin, Aleve, Celebrex. Mobic, Turmeric/CBD/Arnica and/or natural "anti-inflammatory" ideally for eight to 10 weeks after the procedure as they can block the regenerative process.

YOU CAN TAKE: Acetaminophen, Tylenol or wait for the prescription that your doctor will recommend you.

Avoid swimming pools, jacuzzis, bathtubs, saunas, steam rooms or intense sun exposure for 1 week.

Avoid contact with animals at the site of the puncture to prevent allergic reactions or infections for 1 week.

WEEK 1

- Mild to moderate pain is acceptable for a few days, but severe pain is not. If your pain becomes severe, please call us. Restrict yourself to light activity of the everyday living.
- Try not to walk or be on your feet more than 30 minutes at a time for the first 24-48 hours.
- You may be sore, but it is better to move than to be sedentary.

WEEK 2

You may get back to your regular routine, but avoid any strenuous activity. No running or weight lifting the first 3 weeks. The second week is ok to do stretching or yoga.

WEEK 3

- More ambitious physical therapy is ok. Do not overestimate your capabilities, be prudent, listen to your body. This is the time to start adding very light resistance to your workouts. Do not add in any exercises that cause compression, like squats, leg lifts, calf raises, twists, and so forth.

WEEK 4

- You may initiate light running exercise on even and soft terrain, a treadmill, or a track.
- As long as you're not having pain, you can slowly progress to your normal workout,
- but never to the point of pain in the injected area.

STEM CELLS COLOMBIA ALLIES

We can help you connect with other healthcare professionals in Medellín. Affordable, top-quality services designed to meet your needs.
